Summary

Senior Software Engineer and team lead with 9+ years building scalable, high-performance web UIs across AdTech and EdTech — equally hands-on in **React** and **Angular** SPAs and **Micro Frontend** architectures, with **React** as the most recent production stack. At Operative Media, ships **Planner** in React using Hooks, Context API, and React Query, led the Angular 9 → 15 migration of **Spotlight**, cut **Spotlight** load time by ~10% through code splitting, lazy loading, and bundle optimization, and designed a Micro Frontend architecture with Webpack Module Federation. Owns component architecture, accessibility, and frontend security standards, integrates typed **REST** APIs end to end, and partners with Product, Design, and Engineering on the technical roadmap and delivery.

Skills

Languages	TypeScript, JavaScript (ES6+), HTML5, CSS3 / SCSS, Java 17/21, SQL
Frameworks	React.js, Angular (9–19), Angular Signals, Next.js, RxJS, NgRx, Redux, Redux Toolkit (RTK)
React Ecosystem	React Hooks, Context API, Custom Hooks, Functional Components, React Router, React Query (TanStack Query), Server State Management
UI / Styling	Material UI, PrimeNG, Tailwind CSS, Bootstrap, Responsive Design, Component-Driven Development, Design Systems, Accessibility (WCAG / ARIA)
Architecture	SPA, Micro Frontends (MFE), Webpack Module Federation, Monorepo, Clean Architecture, Design Patterns, Component Architecture, System Design
Performance	Code Splitting, Tree Shaking, Lazy Loading, Bundle Optimization, Caching, Rendering Optimization, Change Detection
API & Integration	RESTful APIs, Broadcast Channel API, Axios / Fetch, Authentication, JWT, OAuth 2.0, SSO
Backend (Working)	Java 17/21, Spring Boot, Spring MVC, MongoDB, MySQL
Testing	Jest, Jasmine, Karma, React Testing Library, Cypress, Playwright, JUnit, Mockito, Unit / Integration / E2E
Cloud & DevOps	AWS, CI/CD, GitHub Actions, Azure DevOps, Jenkins, Docker, Maven, Gradle, SonarQube
Security	OWASP, XSS Prevention, CSRF Protection, Content Security Policy (CSP), Secure Coding, JWT / OAuth 2.0
Leadership	Technical Leadership, Architecture Reviews, Mentoring, Stakeholder Management, Sprint Planning, Agile / Scrum, Cross-functional Collaboration, Technical Roadmap
Tooling	Webpack, Babel, npm, Git, Stencil JS, Storybook, Postman
AI Tooling	GitHub Copilot, Cursor, ChatGPT, Claude, AI Pair Programming, Prompt Engineering

Work Experience

Operative Media	04/2022 – Present
Senior Software Engineer (Front End)	
• Own the front-end architecture for Planner on the AOS ad-sales platform — a React.js application shipping business-critical modules for content management, advertising workflows, and analytics. • Built Planner using Hooks, Context API, and React Query for server-state management, integrating typed REST APIs end to end with predictable loading and error handling. • Designed and rolled out a Micro Frontend architecture using Webpack Module Federation, enabling independent deploys of Planner. • Established the Planner testing strategy with Jest and React Testing Library plus E2E coverage, used SonarQube for code quality, and partner with Product, Design, and Engineering on sprint planning and release. • Own Spotlight on the AOS platform — an Angular Micro Frontend shipping feature modules with RxJS and NgRx, deployed independently via Webpack Module Federation; built cross-window and cross-module communication on the Broadcast Channel API.	

- Drove the **Angular 9 → 15** migration of **Spotlight** with no regressions, modernizing the stack and improving long-term maintainability.
- Cut **Spotlight** load time by **~10%** by eliminating redundant API calls and applying **code splitting, lazy loading, tree shaking**, and bundle optimization across state-management and rendering hot paths.
- Established **Spotlight** testing with **Jasmine** and **Karma**, set component-architecture, accessibility, and frontend security standards (XSS prevention, CSP, secure coding), run code and design reviews, and mentor engineers across the team.

Happiest Minds

04/2021 – 04/2022

Senior UI Developer

- Built **SUCCESSMAKER**, a responsive Learning Management System in **Angular 11, RxJS**, and **ngx-translate** — delivering a multi-locale, internationalised UI for learners.
- Designed a library of framework-agnostic web components in **Stencil JS** using **component-driven development**, consumed by both Angular and React apps — eliminating duplicated UI code across product teams.
- Shipped **Practice Generator**, a worksheet authoring tool built with **NgRx Store**, enabling content teams to assemble and publish practice material at scale.
- Integrated **RESTful APIs** and managed asynchronous data flows with **RxJS** operators, building reactive, state-driven screens with predictable loading and error handling.
- Improved runtime performance with **lazy-loaded** feature modules and optimized change detection, and safeguarded core components with **Jasmine/Karma** unit tests.

Accenture

05/2017 – 04/2021

Front End Developer

- Built and maintained responsive front-end interfaces for telecom BSS and retail workflows using **JavaScript, HTML5**, and **CSS3**, integrating with backend **REST APIs**.
- **COX Communications** — worked as a **DevOps Engineer** (2017 – 2018) in the Telecom BSS and Retail domain, owning production deployments (manual and **Jenkins CI/CD**), patching, validations, restarts, and monitoring.
- Automated build, validation, and release steps through **Jenkins** pipelines and shell scripts — reducing manual effort and deployment downtime.
- Partnered with cross-functional teams to triage production incidents and improve application stability, and authored deployment runbooks and validation checklists to streamline handoffs.

Education

Kongu Engineering College

2013 – 2017

Bachelor of Engineering, Computer Science
