Summary

Senior Frontend Engineer and team lead with 9+ years building scalable React and Angular single-page applications (SPA) in AdTech and EdTech. Led a team at Operative Media, driving the platform-wide Angular 9 → 15 migration, designing a Micro Frontend architecture with Webpack Module Federation, and cutting application load time by ~35% through code splitting, lazy loading, and state-management refactors. Provides technical leadership and system design direction, owns code-quality and frontend security standards, and partners with Product and Engineering on the technical roadmap and delivery.

Skills

Languages	TypeScript, JavaScript (ES6+), HTML5, CSS3 / SCSS
Frameworks	React.js, Angular (9–19), Angular Signals, RxJS, NgRx, Redux, Redux Toolkit (RTK)
React Ecosystem	React Hooks, Context API, Custom Hooks, Functional Components, React Router, React Query (TanStack Query), Server State Management
UI / Styling	Material UI, PrimeNG, Tailwind CSS, Bootstrap, Responsive Design, Component-Driven Development
Architecture	SPA, Micro Frontends (MFE), Webpack Module Federation, Monorepo, Clean Architecture, Scalable Frontend Systems, Design Patterns, System Design
Performance	Core Web Vitals, Code Splitting, Tree Shaking, Lazy Loading, Bundle Optimization, Lighthouse
API & Integration	RESTful APIs, Broadcast Channel API, Axios / Fetch, Authentication, JWT, OAuth 2.0, SSO
Testing	Jest, Jasmine, Karma, React Testing Library, Cypress, Playwright, Unit / Integration / E2E
Cloud & DevOps	CI/CD, GitHub Actions, Azure DevOps, Jenkins, Docker, SonarQube
Security	OWASP, XSS Prevention, CSRF Protection, Content Security Policy (CSP), Secure Coding
Leadership	Technical Leadership, Architecture Reviews, Mentoring, Stakeholder Management, Sprint Planning, Agile / Scrum, Cross-functional Collaboration, Technical Roadmap
Tooling	Webpack, Babel, npm, Git, Stencil JS
AI Tooling	GitHub Copilot, Cursor, ChatGPT, Claude, AI Pair Programming, Prompt Engineering

Work Experience

Operative Media	04/2022 – Present
Senior Software Engineer	
- Own frontend architecture for the AOS ad-sales platform (React.js + Angular), shipping business-critical modules for content management, advertising workflows, and analytics. - Drove the platform-wide Angular 9 → 15 migration — modernizing the stack with no regressions and improving long-term maintainability. - Cut application load time by ~35% by eliminating redundant API calls and applying code splitting, lazy loading, tree shaking, and bundle optimization across state-management and rendering hot paths — improving Core Web Vitals. - Designed and rolled out a Micro Frontend architecture using Webpack Module Federation, enabling product teams to build and deploy modules independently; built cross-window and cross-module communication on the Broadcast Channel API, replacing brittle event hacks across the platform. - Established the frontend testing strategy with Jest and React Testing Library plus end-to-end coverage, and integrated SonarQube into CI/CD pipelines to enforce code quality and reduce post-release defects. - Partner with Product and Engineering on backlog grooming, story scoping, sprint planning, and release planning — breaking down epics, unblocking the team mid-sprint, and triaging production defects. - Set code-quality, architecture, and frontend security standards (XSS prevention, CSP, secure coding), run code and design reviews, and mentor engineers across the team — raising review throughput and reducing post-release defects.	

Happiest Minds

04/2021 – 05/2022

Senior UI Developer

- Built **SUCCESSMAKER**, a responsive Learning Management System in **Angular 11**, **RxJS**, and **ngx-translate** — delivering a multi-locale, internationalised UI for learners.
- Designed a library of framework-agnostic web components in **Stencil JS** using **component-driven development**, consumed by both Angular and React apps — eliminating duplicated UI code across product teams.
- Shipped **Practice Generator**, a worksheet authoring tool built with **NgRx Store**, enabling content teams to assemble and publish practice material at scale.
- Integrated **RESTful APIs** and managed asynchronous data flows with **RxJS** operators, building reactive, state-driven screens with predictable loading and error handling.
- Improved runtime performance with **lazy-loaded** feature modules and optimized change detection, and safeguarded core components with **Jasmine/Karma** unit tests.

Accenture

05/2017 – 04/2021

Front End Developer

- **COX Communications** — worked as a **DevOps Engineer** (2017 – 2018) in the Telecom BSS and Retail domain.
- Owned BSS activities including production deployments (manual and **Jenkins CI/CD**), patching, validations, restarts, and monitoring of applications and servers.
- Built and maintained responsive front-end interfaces for telecom BSS and retail workflows using **JavaScript**, **HTML5**, and **CSS3**, integrating with backend **REST APIs**.
- Automated build, validation, and release steps through **Jenkins** pipelines and shell scripts — reducing manual effort and deployment downtime.
- Partnered with cross-functional teams to triage production incidents and improve application stability, and authored deployment runbooks and validation checklists to streamline handoffs.

Education

Kongu Engineering College

2013 – 2017

Bachelor of Engineering, Computer Science
